CHAPTER 1

INTRODUCTION

Film making is a creative form of visual communication that combines storytelling, acting, cinematography, sound, lighting and editing to communicate an idea or experience to an audience. A short film presents a complete story within a limited duration, making it important to develop a clear concept and use every scene effectively. Radio podcasting, on the other hand, communicates stories through audio elements such as narration, dialogue, music, sound effects and silence. Both forms require creativity, planning and effective storytelling.

The project titled “REWORK” is a short thriller film developed as part of the Film Making and Radio Podcasting course. The story begins with a simple and familiar situation in which a boy is working on a video editing project in his room. He receives a phone call informing him that some changes are required in his work. He returns to his laptop and begins reworking the video. After completing the changes, he exports the video and submits it.

The story takes an unexpected turn after the submission. The boy receives a strange notification asking why he sent the video. He is then instructed to watch the last ten seconds of the video. When he watches it again, he notices a mysterious shadow and a figure appearing behind him. Since he knows that he was alone while creating the video, he becomes frightened and confused. Further messages, an unknown phone call and unexplained knocking at the door increase the suspense. The film ends with a mysterious file appearing on his laptop and his own voice coming from the video.

The project is designed not only as a visual short film but also as a story that can be adapted into a radio podcast. The visual elements of the film can be replaced by narration, voice acting, sound effects and background music in the podcast version.

CHAPTER 2

PROJECT OVERVIEW

The main idea of REWORK is to transform an ordinary activity into a mysterious and suspenseful situation. The first part of the film intentionally appears realistic and simple. The audience sees the main character working on a video and assumes that the story is about completing a project. This familiar setting helps the audience connect with the character.

After the video is submitted, the atmosphere gradually changes. The unexpected messages create the first sense of danger. The discovery of the shadow introduces the mystery, while the unknown call and knocking at the door increase the tension. The final scene leaves the audience with questions about who created the mysterious video and how the events are connected.

The film uses a single main location, a small number of characters and easily available objects such as a laptop and mobile phone. This makes the project practical to produce while still allowing different film-making techniques to be demonstrated.

CHAPTER 3

TITLE – REWORK

The title “REWORK” is directly connected to the central idea of the story. At the beginning, rework refers to the process of making corrections to the video. The main character receives a request to make changes, so he returns to the editing process and modifies his work.

However, the meaning of the title changes when the mysterious voice tells him that he has forgotten to rework something. At this point, the audience realizes that the word “REWORK” has a deeper meaning within the story. The title therefore acts as both a reference to video editing and a mystery connected to the events taking place around the character.

CHAPTER 4

GENRE

The film belongs to the thriller and mystery genre. The thriller element is created by gradually increasing tension rather than immediately showing the source of danger. The story begins calmly and becomes progressively more disturbing.

The mystery is maintained by not revealing the identity of the person behind the messages or the figure in the video. The audience receives information at the same time as the main character. This creates curiosity and encourages the audience to continue watching in order to understand what is happening.

The major suspense elements used in the film are:

- Strange phone notifications
- Unknown phone calls
- A mysterious shadow
- An unexplained figure
- Silence
- Door knocking
- Distorted voice
- Unexpected video playback
- The mysterious final video file

CHAPTER 5

OBJECTIVES

The main objective of the project is to create an engaging short thriller film using basic film-making techniques and a simple production setup. The project also aims to demonstrate how camera work, lighting, editing and sound can be combined to create a particular mood and emotional response.

The specific objectives are:

- To develop an original short-film story.
- To understand screenplay and scene development.
- To practice camera framing and shot composition.
- To use lighting to establish mood.
- To create suspense through editing and sound.
- To develop basic video editing skills.
- To understand the importance of background music and sound effects.
- To adapt the story into a radio podcast format.
- To understand the difference between visual and audio storytelling.

CHAPTER 6

STORY DEVELOPMENT

The story was developed around the simple idea of a person discovering something unusual in a video that he has created himself. The initial concept was kept simple so that the suspense could be developed gradually without requiring multiple locations or a large cast.

The first part establishes the character and his normal working environment. The phone call introduces a reason for him to rework the video. This allows the title of the film to become part of the story naturally. Once the video is submitted, the unexpected notification creates the turning point.

The final part was developed to increase the level of suspense step by step. First, the character receives a strange message. Then he notices a shadow. After that, he discovers a figure in the video. The mysterious phone call adds another layer to the story, while the knocking at the door creates an immediate physical threat. Finally, the appearance of the new video file and the character's own voice provide the climax.

CHAPTER 7

STORY SYNOPSIS

The story follows a boy who is working alone in his room on a video project. He spends time editing the video and carefully checks his work. After becoming tired, he decides to take a short break. At that moment, his phone rings.

During the call, he learns that some changes are required before the video can be submitted. He returns to his laptop and begins the rework. He cuts, trims and adds content before previewing the final version. After correcting another mistake, he completes the video and submits it.

The boy believes that his work is finished. However, after a short period, his phone vibrates. A notification informs him that the video has been received. Another message appears asking, “Why did you send this?” He becomes confused. A further message instructs him to watch the last ten seconds of the video.

He opens the video and watches the ending. At first, he notices nothing unusual. When he rewinds and watches it again, he sees a shadow moving in the background. He pauses the video and looks around the room, but nobody is there. When he zooms into the frame, he notices a figure standing behind him.

The situation becomes frightening when his phone displays the message “DON’T TURN AROUND.” The laptop begins playing the video by itself, and the figure appears to move closer. The laptop then suddenly goes black.

His phone rings again. The call comes from an unknown number. A distorted voice tells him that he forgot to rework one thing. When he asks what it is, the voice replies, “The ending.”

A knock is heard at the door. The boy approaches it but receives a final message telling him not to open it. He steps backward as the knocking becomes louder. The laptop turns on again and displays a new file named REWORK_FINAL_FINAL.mp4.

The file plays automatically, and the boy hears his own voice saying, “If you’re watching this... it’s already too late.” The screen turns black, leaving the audience with an unanswered question about what happened.

CHAPTER 8

CHARACTERS

The main character of the film is a young boy who spends most of the story working alone in his room. He is initially calm, focused and interested in completing his work. His emotional state gradually changes as he encounters unexpected events. His expressions and reactions are important because the audience understands the seriousness of the situation mainly through his behavior.

The second character is the mysterious person or entity represented through the messages, phone call and video. This character is never directly introduced. Instead, the audience experiences the character through indirect clues. Keeping the identity hidden helps maintain the mystery throughout the film.

CHAPTER 9

SCENE DEVELOPMENT

9.1 Scene 1 – Entering the Room

The first scene introduces the main character and establishes his normal environment. He enters the room carrying his laptop and sits at the table. He opens the laptop and begins working on his video.

The purpose of this scene is to establish a peaceful atmosphere before the thriller elements begin. The camera can use wider and medium shots to show the room and the character's activities.

9.2 Scene 2 – Incomplete Work

After spending some time editing, the boy becomes tired. He looks at the unfinished video and decides to take a short break. He saves the project and stands up.

Suddenly, his phone rings. The unexpected ringtone interrupts the calm atmosphere. He looks at the phone and answers the call.

This scene acts as a transition between the normal part of the story and the beginning of the main conflict.

9.3 Scene 3 – The Phone Call

During the phone call, the boy learns that changes are required in his video before it can be submitted. The conversation itself can be kept simple so that the focus remains on his reaction.

After ending the call, he looks at the unfinished project. There is a short moment of silence before he sits down again. This pause can be used to show his hesitation and establish the importance of the next scene.

9.4 Scene 4 – REWORK

The boy opens the editing project and begins making the requested changes. The editing process can be shown using close-up shots of the laptop, keyboard and timeline.

The words “Cut,” “Trim,” “Add” and “Preview” can be shown through quick cuts or screen text. He previews the video and notices another mistake. He corrects it and watches the final version.

At this stage, the audience believes that the problem has been solved and that the film is about to end.

9.5 Scene 5 – Submission

The boy exports the completed video. The progress bar slowly reaches 100 percent. He attaches the video and sends it to the required person or team.

He leans back in his chair and smiles slightly.

The scene cuts to black.

This creates a false ending. The audience expects the film to finish, but the real thriller begins after the cut.

9.6 Scene 6 – The Notification

After the screen becomes black, there is a short period of silence.

Suddenly, the phone vibrates.

The boy looks at his phone and sees that it is 12:47 AM. A notification says:

“VIDEO RECEIVED.”

He relaxes for a moment. Then another notification appears.

“NEW MESSAGE.”

He opens the message.

“WHY DID YOU SEND THIS?”

The boy becomes confused. A second message appears:

“WATCH THE LAST 10 SECONDS.”

He opens the submitted video.

9.7 Scene 7 – The Last Ten Seconds

The video initially appears normal. The boy reaches the final ten seconds and does not notice anything unusual.

He rewinds the video and watches it again. This time, a shadow moves in the background. He freezes.

He pauses the video and looks behind him. Nothing is there.

He returns to the laptop and zooms into the video frame. A figure can be seen standing behind him.

The discovery creates the main mystery of the film because the boy remembers being completely alone when the video was recorded.

9.8 Scene 8 – The Room

The boy slowly looks around the room. The door is locked. The window is closed. Everything appears normal.

Suddenly, his phone vibrates. A new message appears:

“DON’T TURN AROUND.”

He stops moving. The laptop begins playing the video by itself. The figure visible in the video appears to be getting closer. The screen suddenly goes black.

This scene should use minimal dialogue and rely heavily on sound, facial expressions and editing.

9.9 Scene 9 – The Call

The phone begins ringing again. The screen shows:

UNKNOWN NUMBER

The boy hesitates before answering. There is silence. A distorted voice finally speaks:

“You forgot to rework one thing.”

The boy asks:

“What?”

The voice replies:

“The ending.”

The call disconnects. A knock is heard. Then another knock. The boy slowly moves toward the door.

Before opening it, his phone receives another message:

“DON’T OPEN IT.”

The knocking becomes louder. He moves away from the door. The laptop suddenly turns on. A new file appears:

REWORK_FINAL_FINAL.mp4

The file starts playing automatically. His own voice comes from the laptop:

“If you’re watching this... it’s already too late.”

The screen turns black.

CHAPTER 10

CLIMAX AND ENDING

The climax occurs when the mysterious video file appears on the laptop and begins playing without the character's action. The appearance of the file connects the earlier events with the final moment.

The use of the character's own voice makes the situation more disturbing because it suggests that the mysterious event is connected directly to him. The film does not explain who created the file or how the voice was recorded.

The ending is intentionally open-ended. This allows the audience to create their own interpretation of the events. The uncertainty is an important part of the thriller experience.

CHAPTER 11

CINEMATOGRAPHY

Cinematography is used to control how the audience sees the story. During the first part of the film, normal camera shots can be used to create a realistic atmosphere. As the story becomes more suspenseful, closer shots can be introduced.

Close-up shots are particularly useful for showing the phone screen, laptop screen, facial expressions and important objects. Over-the-shoulder shots can be used when the character watches the mysterious video. A slow camera movement toward the door can be used during the knocking scene to increase tension.

The camera can remain stable during normal scenes and become slower or more controlled during suspenseful moments. The objective is to make the audience feel that something unusual is about to happen.

CHAPTER 12

LIGHTING

Lighting plays an important role in creating the mood of the film. The beginning can use normal room lighting because the character is in a comfortable and familiar environment.

After the story becomes mysterious, the lighting can become darker and more focused. The laptop screen can provide a visible light source on the character's face during the later scenes.

Low lighting around the room can create shadows and empty spaces, making the audience wonder whether someone is present. The door and background can be kept slightly darker during the final scenes to increase suspense.

CHAPTER 13

SOUND DESIGN

Sound is one of the most important elements in REWORK because it helps create suspense even when there is no visible danger.

Normal scenes can include keyboard typing, mouse clicks, laptop sounds and room ambience. These sounds establish the realistic environment.

As the thriller begins, phone vibration, notification sounds and subtle background music can be introduced. The sound of the door knocking becomes especially important during the climax.

Silence is also deliberately used. A sudden removal of background music before an important event can make the next sound much more effective.

Important sound elements include:

- Keyboard typing
- Mouse clicks
- Phone ringtone
- Phone vibration
- Notification sounds
- Laptop startup sound
- Door knocking
- Background suspense music
- Low-frequency ambience
- Distorted voice
- Sudden silence

CHAPTER 14

EDITING TECHNIQUES

Video editing is central to the concept of REWORK because the story itself is about editing a video.

The editing process can include cuts, trims, transitions, screen recordings and text overlays. During the normal editing scenes, quick cuts can show the character working without showing the entire process.

For the thriller sections, editing can be used to control the timing of information. For example, the mysterious figure should not be shown clearly at first. Instead, a shadow or partial figure can be shown before revealing more information.

Glitch effects can be used when the laptop begins behaving unexpectedly. A sudden cut to black can also create suspense.

CHAPTER 15

USE OF PROPS AND LOCATION

The project is designed to be produced using a simple location and easily available props. The main location is a bedroom or study room where the character works.

The major props required are:

- Laptop
- Mobile phone
- Table
- Chair
- Headphones, if required
- Notebook or other study materials
- Door and window

The limited number of props makes the film practical to shoot while allowing the focus to remain on the character and story.

CHAPTER 16

RADIO PODCAST ADAPTATION

The same story can be adapted into a radio podcast by removing the visual dependency and replacing visual information with audio descriptions and sound effects.

In the short film, the audience can see the character looking at his phone. In the podcast, the same action must be communicated through narration and sound. For example, the narrator can describe that the character receives a notification while the sound of phone vibration is played.

The mysterious figure in the video cannot be shown in a podcast. Instead, the suspense can be created through silence, breathing sounds, a distorted voice and background music. This demonstrates the importance of sound imagination in radio storytelling.

CHAPTER 17

RADIO PODCAST SCRIPT APPROACH

The podcast version can begin with a narrator describing the character entering his room and starting his work. Keyboard sounds and mouse clicks can be used in the background.

When the phone rings, the ringtone interrupts the narration. The conversation can then be presented through voice acting.

During the suspense portion, the narration becomes slower and the background music becomes more intense. The phone vibration can be played before each mysterious message.

When the character discovers the figure in the video, the podcast can use silence instead of a visual reveal. The narrator can describe the character's reaction while a low background sound creates tension.

The final door knocking can be made progressively louder. After the mysterious voice speaks, all background sound can suddenly stop. The final sentence can then be followed by complete silence before the podcast ends.

CHAPTER 18

VOICE AND AUDIO PERFORMANCE

Voice acting is important for the podcast version because the audience depends entirely on sound to understand the emotions of the characters.

The main character's voice should initially sound normal and relaxed. As the story develops, his voice should gradually become nervous and frightened.

The mysterious voice should be different from the main character's voice. Voice distortion, reduced pitch or echo can be used to make it sound unfamiliar.

The following elements are important:

- Clear pronunciation
- Appropriate pauses
- Emotional voice modulation
- Different voices for different characters
- Controlled speaking speed
- Appropriate background music
- Effective use of silence

CHAPTER 19

PRODUCTION PROCESS

The production of the project can be divided into three stages: pre-production, production and post-production.

During pre-production, the story idea was developed and converted into a screenplay. The scenes, characters, location, props and required sound effects were identified. The suspense sequence was also planned so that the intensity would gradually increase.

During production, the scenes are recorded according to the screenplay. Different camera angles are captured so that there are enough options during editing. Phone screens, laptop screens and character reactions are recorded separately where necessary. Voice recordings for the podcast are also prepared.

During post-production, the recorded footage is organized and edited. Unnecessary portions are removed and the scenes are arranged according to the screenplay. Sound effects, background music, text messages and visual effects are added. The final video is then exported after checking the complete sequence.

CHAPTER 20

CHALLENGES FACED

One of the major challenges in producing a thriller film with a simple setup is creating suspense without using expensive equipment or multiple locations. Since the story mainly takes place in one room, camera movement, lighting and sound must be used effectively to prevent the scenes from becoming repetitive.

Another challenge is creating a convincing mysterious figure and video effect. The figure should not be revealed too clearly because showing too much information can reduce the mystery.

Audio synchronization is another important challenge. Phone notifications, door knocks, background music and dialogue must occur at the correct moments to create the intended emotional effect.

CHAPTER 21

LEARNING OUTCOMES

Through this project, several practical skills can be developed. The project provides experience in screenplay writing, scene planning, camera operation, lighting, acting, sound recording and video editing.

The project also demonstrates the importance of timing in storytelling. A simple sound or pause can sometimes create more suspense than a complicated visual effect.

The radio podcast adaptation provides additional experience in voice acting, narration and audio editing. It also demonstrates how the same story must be presented differently depending on the medium.

CHAPTER 22

EXPECTED OUTCOME

The final outcome of the project is a short thriller film titled REWORK, supported by a radio podcast adaptation of the same story. The film is expected to engage the audience through a gradual transition from an ordinary working environment to a mysterious and frightening situation.

The project demonstrates the practical use of visual storytelling, sound design and editing techniques. The open-ended conclusion allows the audience to think about the possible meaning of the events rather than providing a direct explanation.

CHAPTER 23

CONCLUSION

The REWORK project demonstrates how a simple story can be developed into an engaging thriller through effective use of film-making techniques. The story begins with an ordinary video editing task and gradually introduces mystery through notifications, a strange video, an unknown voice and unexplained events.

The project combines screenplay writing, acting, cinematography, lighting, sound design and video editing. Each element contributes to the overall suspense of the film. The use of a simple location and limited characters also demonstrates that an effective short film does not necessarily require complex production resources.

The radio podcast adaptation further demonstrates how storytelling can be transferred from a visual medium to an audio medium. Elements that are visible in the film must be communicated through narration, dialogue, sound effects, music and silence.

Overall, REWORK provides practical experience in both film making and radio podcasting while demonstrating the importance of creativity, timing and audience engagement in media production.

“Some work should never be finished.”
